

Spider's Web

Here's a fun way to make a spider's web

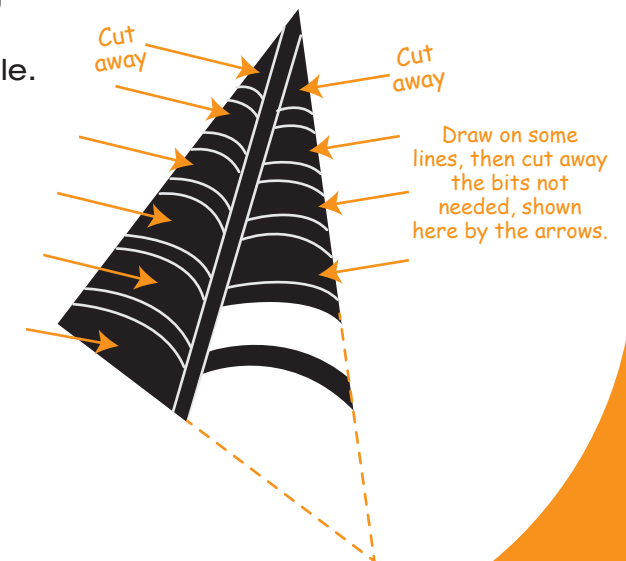

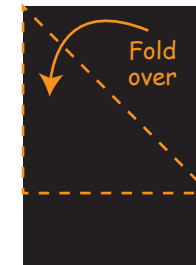

You will need

*Black crepe or tissue paper.
Alternatively a large sheet of black paper.
A pencil, ruler, scissors and tape.*

Instructions

- 1 Start with a square sheet of paper. You can create a square by folding the paper as shown. Then cut away the unwanted bit.
- 2 Fold the paper in half and half again.
- 3 Draw some lines to show you where to cut. Do this by drawing 2 straight lines from the folded point out to the end of the triangle. Use a ruler to help. Then draw some curved lines that come off these lines.
- 4 With scissors, cut out the unwanted shapes and unfold your web.
- 5 Tape on to a window or over a door frame. Make white webs and purple webs, even orange webs if you like!
