

Work it out

Rita and Freddy have been investigating different types of metals in science. They found out the following facts:-

Copper did not rust very quickly and was good at conducting electricity.

Tin bent easily, could be shaped and takes some time to rust.

Iron was strong. It conducts both heat and electricity.

Aluminium could be bent, did not rust and conducts electricity and heat.

Which of these metals would be best for these jobs and why?

1

Good as cutlery

Please remember to recycle this activity

2

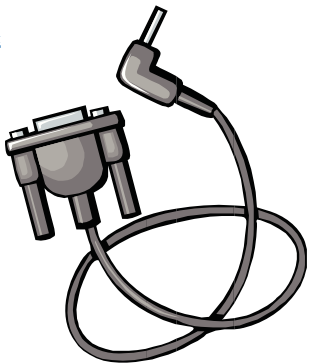

Making saucepans

3

Building bridges

4

Producing electrical wiring

5

Making cans
