

Conductors and Insulators

Some things are very good at conducting electricity. These include copper and silver. Some things are poor conductors of electricity. These include plastic and wood.

Natural materials are often good insulators of heat. Metal things are poor insulators.

Tick which you think might be the good conductors and put a cross by good insulators.

☐ Plastic fork

☐ Metal spoon

☐ Copper Wire

☐ Paper Clip

☐ Wooden Ruler

☐ Silver Ring

☐ Plastic Spoon

☐ Wooden Stick

Please remember to recycle this activity

What do you think would happen to the handle of a metal spoon if you placed it in some hot water?

What would happen to the handle of a plastic spoon?
